Plössl Eyepieces

QUICK SETUP GUIDE

#93316, #93317, #93318, #93319, #93320, #93323, #93325, #93326, #93328

Installing Your Eyepiece

1. Remove the Dust Caps

Take the cap off your telescope's focuser or diagonal and remove the caps from your eyepiece.

2. Loosen the Thumbscrew(s)

Back out the thumbscrew(s) on the focuser or diagonal a few turns so the eyepiece barrel can slide in.

3. Insert the Eyepiece

Place the eyepiece barrel (the chrome-colored end) into the focuser or diagonal opening.

4. Secure It

Gently tighten the thumbscrew on the focuser/diagonal until the eyepiece is snug. Don't overtighten, as this may create marks or scratches on the chrome barrel.

Using Eyecups

1. The rubber eyecups can be folded up or down as needed.

If you don't wear glasses, keep the eyecups extended.

If you do wear glasses, fold the eyecups down.

Calculating Magnification

The magnification you get with this eyepiece depends on the focal length of your telescope. Divide the telescope's focal length by the eyepiece's focal length to find your magnification.

$$\left(\text{Focal Length of Telescope} \div \text{Focal Length of Eyepiece} \right) = \text{Magnification}$$
